DEMFLLOOD™ DEMOUNTABLE FLOOD PROTECTION SYSTEMS

Providing a solution for communities at risk from flooding, the BAUER-IBS DEMFLLOOD™ System is a highly engineered Demountable Flood Protection System that can be erected rapidly on-site to provide immediate protection.

Efficient and cost-effective the DEMFLLOOD™ System comprises precision manufactured aluminium extruded profiles in the form of end posts, intermediate posts and dam beams; base plates and cast-in anchor plates complete the System.

A fully demountable System, DEMFLLOOD™ is cost-effective and efficient and does not permanently impact visually on the environment – just protects when flooding is imminent.

DEMFLLOOD™ is already protecting communities at over 300 sites throughout Europe, and the UK is now benefiting from this technology, with commissions for both Shrewsbury and Bewdley on the River Severn as part of the Environment Agency's flood alleviation scheme; both areas have been severely affected by flooding in recent years.

-2-

Once the risk of flooding has gone the entire DEMFLOOD™ assembly can be dismantled down and stored until next required. With an exceptional design life DEMFLOOD™ will protect for many years and therefore provide an excellent return on its investment.

-Ends-

About BAUER Inner City Limited

BAUER Inner City Limited, part of the BAUER Group of companies, is the UK Division that operates within specialist product areas such as the DEMFLOOD™ Demountable Flood Protection System. BAUER Inner City Limited is committed to bringing new and innovative flood protection solutions to the UK.
